Free A Generic Fault Tolerant Architecture For Real Time

Management of fault tolerance (that is, promoting a process in a standby state to the active state, and making a process in an active state exit from the active state) is handled by the fault-tolerance controlling processes. A generic management of fault tolerant processes is thus provided in which fault detection and switchover is carried out independently of the applications.

aim of fault-tolerant design is to minimize the probability of failures, whether those failures simply annoy the customers or result in lost fortunes, human injury or environmental disaster. exist to increase component reliability. Failure rates in hardware are 2. Fault tolerance and redundancy
There are various approaches to achieve fault-tolerance.

Generic Fault Tolerant Software Architecture Reasoning and Customization Ling Yuan, Jin Song Dong, Jing Sun, and Hamid Abdul Basit Abstract—This paper proposes a novel heterogeneous software architecture GFTSA (Generic Fault Tolerant Software Architecture) which can guide the development of safety critical distributed systems.

IEEE TRANSACTIONS ON RELIABILITY 1 Generic Fault Tolerant

The project thus designed a generic fault-tolerant architecture with two dimensions of redundancy and a third multi-level integrity dimension for accommodating software components of different levels of criticality.

A Generic Fault Tolerant System for Dynamic Scheduling in

Fault-tolerant systems are expected to operate in a variety of devices ranging from standard PCs to embedded devices. In addition, the emergence of new software technologies has required these applications to meet the needs of heterogeneous software platforms. However, the existing approaches to build fault-tolerant systems are often targeted at a particular platform and software technology.
