Section 1 -- Introduction To Binary Trees A binary tree is made of nodes, where each node contains a "left" pointer, a "right" pointer, and a data element. The "root" pointer points to the topmost node in the tree. The left and right pointers recursively point to smaller "subtrees" on either side.

A full m -ary tree is a tree in which every internal vertex has exactly m children. Discussion Notice the distinction between an m -ary tree and a full m -ary tree. The first may have fewer than m children of some internal vertex, but a latter must have exactly

A tree is a data structure made up of nodes or vertices and edges without having any cycle. The tree with no nodes is called the null or empty tree. A tree that is not empty consists of a root node and potentially many levels of additional nodes that form a hierarchy.

A full binary tree (sometimes referred to as a proper or plane binary tree) is a tree in which every node has either 0 or 2 children. Another way of defining a full binary tree is a recursive definition. A full binary tree is either: A single vertex. A graph formed by taking two (full) binary trees, adding a vertex, and adding an edge directed ...
