Similarly, the number of original and review papers devoted to various aspects of dioxygen activation are on the rise. This trend is due obviously to the relevance of catalytic oxidation to biological processes such as dioxygen transport, and the action of oxygenase and oxidase enzymes related to metabolism.

Numerous efforts have been devoted to the development of efficient approaches for the C-H bond activation and functionalization of N-oxides in recent years, including arylation, alkenylation, alkylation, acyloxylation, amination, amidation and sulfonylation. In this review, recent advances in this area are summarized and their mechanisms are ...

Abstract: Catalytic C-H activation has emerged as a powerful tool for sustainable syntheses. In the recent

years, notable success was achieved with the development of cobalt-catalyzed C–H functionalizations with either in situ generated or single-component cobalt-...
