One recent development in the field of nanomaterials is the ability not only to tailor the properties of nanomaterials but to tune these properties. Tunable materials allow to change the properties of these materials reversibly and in a controlled manner after fabrication, e.g., by applying an electric field.

BJNANO - Advances in nanomaterials

Advances in Nanomaterials (AN) is an international and interdisciplinary scholarly open access journal and dedicated to a high scientific standard. This journal provides a review of the latest research findings and key applications in the field of nanomaterials.

Since the discovery of mechanically exfoliated graphene in 2004, research on ultrathin two-dimensional (2D) nanomaterials has grown exponentially in the fields of condensed matter physics, material science,

chemistry, and nanotechnology.

Recent Advances in Ultrathin Two-Dimensional Nanomaterials

During the past three decades, the field of nanomaterials experienced a tremendous rise from the early beginnings to modern-day technologies, and still, new ideas and breakthroughs keep opening new perspectives for future technologies, from cars to aircraft, from semiconductors and electronics to novel displays, from energy harvesting to energy storage technologies and from biomimetic structures to medical technologies, to mention just a few examples.
