Another challenge in SPMnanolithography is its reproducibility and pattern mass production. Further work is needed to fully understand the fabrication mechanism, to control and optimize nanofabrication processes. Acknowledgment This work is supported by NUS Nanoscience and Nanotechnology Initiative (NUSNNI), National University of Singapore. References 1.

That is, advances in lithography for device fabrication have so far come about by improving the numerical aperture (NA) of the optical system and shortening the exposure wavelength.

first hint about what we now know as "nanoscience" [1]: "The principles of physics, as far as I can see, do not speak against the possibility of maneuvering things atom by atom." More generally, nanoscience is the study of the behavior of objects at a very small scale, roughly 1 to 100 nanometers (nm). One nanometer is one billionth of ...
