

airborne pulsed doppler radar pdf

A pulse-Doppler radar is a radar system that determines the range to a target using pulse-timing techniques, and uses the Doppler effect of the returned signal to determine the target object's velocity. It combines the features of pulse radars and continuous-wave radars, which were formerly separate due to the complexity of the electronics.. Pulse-Doppler systems were first widely used on ...

Pulse-Doppler radar - Wikipedia

Radar is a detection system that uses radio waves to determine the range, angle, or velocity of objects. It can be used to detect aircraft, ships, spacecraft, guided missiles, motor vehicles, weather formations, and terrain. A radar system consists of a transmitter producing electromagnetic waves in the radio or microwaves domain, a transmitting antenna, a receiving antenna (often the same ...

Radar - Wikipedia

If multiple signal sources of the same frequency are present, or multiple paths exist between a radar and target, then the total signal at a location is the sum (superposition principle). The result is interference: constructive interference occurs if the waves

Radar Fundamentals - Naval Postgraduate School

Over its long production history a wide range of radar types and subtypes have been fitted to variants of the Sukhoi Flanker fighter. Whilst some observers like to generalise the term 'Flanker radar' it is not unlike saying 'Pentium PC' - the range of power aperture product performance seen across these radars is greater than in any other tier one combat aircraft.

Flanker Radars in Beyond Visual Range Air Combat

Introduction. The word RADAR is an acronym for RAdio Detection And Ranging. As it was originally conceived, radio waves were used to detect the presence of a target and to determine its distance or range. The reflection of radio waves by objects was first noted more than a century ago.

Radar Fundamentals (Part I) Aircraft 101

La détection par laser ou lidar, acronyme de l'expression en langue anglaise « light detection and ranging » ou « laser detection and ranging » (soit en français « détection et estimation de la distance par la lumière » ou « par laser »), est une technique de mesure de distance fondée sur l'analyse des propriétés d'un faisceau de lumière renvoyé vers son émetteur.
