subject of abstract algebra and no student should go through such a course without a good notion of what a proof is, the importance of applications such as coding theory and cryptography has grown significantly.

N-ALGEBRAIC STRUCTURES AND S-N-ALGEBRAIC STRUCTURES - arXiv

Abstract Algebra: Structures and Applications helps students understand the abstraction of modern algebra. It emphasizes the more general concept of an algebraic structure while simultaneously covering applications. The text can be used in a variety of courses, from a one-semester introductory course to a full two-semester sequence. ...

Abstract Algebra: Structures and Applications - crcpress.com

As the title of the course indicates we will study basic algebraic structures such as groups, rings and fields together with maps, which respect the structures. We will ... For several applications the notions of group is too restrictive, i.e. we asked for too many axioms. One can weaken the notion in two ways.

Bitopological Spaces: Theory, Relations with Generalized Algebraic Structures and Applications Preface In theoretical and applied areas of mathematics we frequently deal with sets endowed with various structures.

Bitopological Spaces: Theory, Relations with Generalized

Most algebraic structures have more than one operation, and are required to satisfy a long list of axioms. Here is a partial list of the most important algebraic structures: A group is an algebraic structure with a single operation, as defined above.

Algebraic Structures - Bard College

This survey deals with problems arising in the context of Grassmann products of vector spaces. Background material on Grassman products (exterior products) can be found in one of the standard references on multilinear algebra, for example C81 or C191.

Algebraic Structures and Discrete Mathematics Class notes

These notes have two major parts: in one, we focus on an algebraic structure called a group; in the other, we focus on a special kind of group, a ring. In the first semester, therefore,

Preface These are the notes of the second-year course Algebraic Structures I at Queen Mary, University of London, as I taught it in the second semester 2005–2006.

Peter J. Cameron - School of Mathematical Sciences

In mathematics, and more specifically in abstract algebra, an algebraic structure on a set A (called carrier set or underlying set) is a collection of finitary operations on A ; the set A with this structure is also called an algebra. Examples of algebraic structures include groups, rings, fields, and lattices. More complex structures can be ...
