In this study, we present an integrative analysis of propulsive dynamics in the hindlimb of the American alligator (*Alligator mississippiensis*Daudin). By integrating data on ... in alligators may be a consequence of dragging the tail rather than general features of non-parasagittal postures.

**Hindlimb function in the alligator: integrating movements**

An alligator that has never been fed by humans may attack if it's teased or feels trapped, but that's uncommon. Most alligators would never get close enough to humans to be teased if they hadn't, at one time or another, received food from humans.

**Staying Safe in Alligator Territory - Alligator Safety**

The majority of American Alligators inhabit Florida and Louisiana. In Florida alone there are an estimated more than 1 million alligators. The United States is the only nation on earth to have both alligators and

crocodiles. American Alligators live in freshwater environments, such as ponds, marshes, wetlands, rivers, and swamps.

### **ALLIGATOR FACT SHEET - World Animal Foundation**

The largest American alligator scientifically verified in Florida for the period from 1977 to 1993 was reportedly 4.23 m (13 ft 11 in) and weighed 473 kg (1,043 lb), although another specimen (size estimated from skull) may have measured 4.54 m (14 ft 11 in). American alligators do not normally reach such extreme sizes.
