Once symbolic algebra was developed in the 1500s, mathematics flourished in the 1600s. Coordinates, analytic geometry, and calculus with derivatives, integrals, and series were developed in that century. Algebra became more general and more abstract in the 1800s as more algebraic structures were invented.

for modern algebraic geometry. On the other hand, most books with a modern approach demand considerable background in algebra and topology, often the equivalent of a year or more of graduate study. The aim of these notes is to develop the theory of algebraic curves from the viewpoint of modern algebraic geometry, but without excessive prerequisites.
