In this document, body size, strength, and mobility data are presented to represent the current FAA maintenance population. In the future, this population will include a wider range of ethnic ...

Section 14 contents 14 Anthropometry and biomechanics

Anthropometry is the study of the measurement of the human body in terms of the dimensions of bone, muscle, and adipose (fat) tissue. Measures of subcutaneous adipose tissue are important because

Body Measurements (Anthropometry) Manual

strength data of agricultural workers for equipment design and ergonomic evaluation of farm equipment. Review shows that many of the studies are focused on anthropometric data and very few have considered strength parameters.

Anthropometric and strength data of Indian agricultural

Using adjusted male data is difficult, because the strength of women compared to men is a function of the particular strength measurement being compared (Lauback, 1976). Snook (1974) has illustrated that the women working on industrial jobs involving lifting are significantly stronger than women who do not work outside of their homes.
