sets. In fuzzy logic, the boundaries between sets are blurred. In the overlap region, an object can be a partial member of each of the overlapping sets. The blurred set boundaries give fuzzy logic its name. By admitting multiple possibilities in the model, the linguistic imprecision is taken into account. The membership functions defining the three fuzzy sets shown in Fig. 1 are triangular.

where  $x$  and  $y$  represent input and output fuzzy linguistic variables, respectively, and  $A \in \mathcal{F}(X)$  and  $B \in \mathcal{F}(Y)$  ( $1 \leq n$ ) are fuzzy sets representing linguistic values of  $x$  and  $y$ . Typically in robotics applications, the input  $x$  refers to sensory data and  $y$  to actuator control signals.
