Bacterial Biogeochemistry The Ecophysiology Of Mineral

glycerol. The collection represents aerobic heterotrophic bacteria from pelagic waters. Bacteria were grown in media according to their physiological needs of salinity. Isolates from the Baltic Sea were grown on Zobell media (ZoBELL, 1941) (800 ml filtered seawater from the Baltic, 200 ml Milli-Q water, 5g Bacto-peptone, 1g Bacto-yeast extract).

Isolates as models to study bacterial ecophysiology and

message is that bacterial ecophysiology, particularly growth rates in seawater, and functionalities inferred through the identity, abundance and expression of specific genes could be mechanistically linked if more work is done to isolate, culture and study bacteria in pure cultures.
