Biotechnology is the broad area of biology involving living systems and organisms to develop or make products, or "any technological application that uses biological systems, living organisms, or derivatives thereof, to make or modify products or processes for specific use" (UN Convention on Biological Diversity, Art. 2). Depending on the tools and applications, it often overlaps with the ...

The cell (from Latin cella, meaning "small room") is the basic structural, functional, and biological unit of all known living organisms.A cell is the smallest unit of life.Cells are often called the "building blocks of life". The study of cells is called cell biology. Cells consist of cytoplasm enclosed within a membrane, which contains many biomolecules such as proteins and nucleic acids.

The significance of the first cloned mammal, Dolly, was that for the first time cloning was achieved from an adult (differentiated) cell. To fully appreciate this point consider that normally, one cell, the fertilized egg, contains all of the information needed to multiply and give rise to all of the specialized cells in the body.
