The black-backed bittern (*Ixobrychus dubius*), also known as the black-backed least bittern or Australian little bittern, is a little-known species of heron in the family Ardeidae found in Australia and vagrant to southern New Guinea. Formerly lumped with the little bittern, it is one of the smallest herons in the world.

### **Black-backed bittern - Wikipedia**

The American bittern is a stocky, medium-sized wading bird. The neck and body are buffy-white with brown vertical streaking and the upperparts are rich brown. Black flight feathers contrast with brown upperwing coverts, giving the wing a two-toned appearance in flight. Adult bitterns have a black patch extending down either side of the white throat.

### **American Bittern, *Botaurus lentiginosus* - nj.gov**

The Black Bittern is a heron, dark grey to black in colour, with buff streaks on the throat and a characteristic yellow streak on the sides of the head and down the neck. The female is paler than the male, with a more yellow wash on the underparts.
