On Characterizing the Capacity of Neural Networks using Algebraic Topology Although there are many flavors of algebraic topology, a powerful and computationally realizable tool is homology.

from the capacity theory of adelic subsets of algebraic curves. We will use fundamental results of Cantor [Can80] and Rumely [Rum89,Rum13] about capacity theory to prove several results about such polynomials. In particular, we will prove in Theorem 6 a stronger form of the following result.

Capacity model implies that television viewers will construct their understanding of the narrative content by accessing prior knowledge and draw inferences on the new material based on previous exposure. Theory and empirical research has supported the notion that people are using working memory to process information needed to follow the story line or plot.
