

carotid disease the role pdf

Carotid artery stenting (CAS) is an endovascular procedure where a stent is deployed within the lumen of the carotid artery to treat narrowing of the carotid artery and decrease the risk of stroke. CAS is used to treat narrowing of the carotid artery in high-risk patients, when carotid endarterectomy is considered too risky. Carotid artery stenosis can present with no symptoms or with symptoms ...

Carotid stenting - Wikipedia

Intima-media thickness (IMT), also called intimal medial thickness, is a measurement of the thickness of tunica intima and tunica media, the innermost two layers of the wall of an artery. The measurement is usually made by external ultrasound and occasionally by internal, invasive ultrasound catheters; see Intravascular ultrasound. Measurements of the total wall thickness of blood vessels can ...

Intima-media thickness - Wikipedia

Died from a sudden heart attack at age 49; Non-smoker with no alarming risk factors; No prior symptoms of heart disease; Sadly, every day, so many families like the Fernandez's are shocked and left in pain and sorrow by an unpredicted heart attack, but they don't have to.

Society for Heart Attack Prevention and Eradication

BACKGROUND AND PURPOSE: Hypotension and bradycardia are common in carotid artery stenting (CAS) and are particularly worrisome in the high risk patient who is typically referred for CAS. The purpose of this work was to assess the incidence and predictors of hypotension and bradycardia and the risk of their delayed occurrence after CAS.

Predictors and Timing of Hypotension and Bradycardia after
