Cartesian Currents, Weak Diffeomorphisms and Existence Theorems in Nonlinear Elasticity MARIANO GIAQUINTA, GIUSEPPE MODICA, Jiří SOUCEK Communicated by E. GIUSTI & S. ANTMAN Summary  
In this paper we introduce some new classes of functions, among these a class of weak diffeomorphisms.

Currents which arise due to the motion of charges are the source of magnetic fields. When charges move in a conducting wire and produce a current  $I$ , the magnetic field at any point  $P$  due to the current can be calculated by adding up the magnetic field

In this survey paper we discuss the role of cartesian currents in the problem of equilibrium configuration of liquid crystals and in particular with respect to the occurrence of line and point singularities.

A Cartesian coordinate system is the unique coordinate system in which the set of unit vectors at different points in space are equal. In polar coordinates, the unit vectors at two different points are not equal because they point in different directions. We show this in Figure B.2.5.

### **Review B: Coordinate Systems - University of Michigan**

A Cartesian coordinate system is a coordinate system that specifies each point uniquely in a plane by a set of numerical coordinates, which are the signed distances to the point from two fixed perpendicular directed lines, measured in the same unit of length.
