1 Introduction to Catalysis Catalysis in Industry Catalysts are the workhorses of chemical transformations in the industry. Approximately 85–90% of the products of chemical industry are made in catalytic processes. Catalysts are indispensable in Production of transportation fuels in one of the approximately 440 oil refineries all over the world.

The chemical nature of catalysts is as diverse as catalysis itself, although some generalizations can be made. Proton acids are probably the most widely used catalysts, especially for the many reactions involving water, including hydrolysis and its reverse.

Homogeneous and Heterogeneous Catalysis

History : Catalyst technology has been used for many centuries. It ranged from inorganic catalyst to make soaps to enzyme catalysts for producing wines, cheese and other food and beverages. The industrial catalyst technology started with the large-scale production of sulfuric acid on platinum catalyst in 1875.

Nanoscale Effects in Catalysis – Are catalyst particles simply small versions of the catalyst material? – Does the nanoscale influence catalytic properties beyond simply presenting more surface atoms? – What possibilities exist for nanoscale modification of catalyst behavior? 1. Modification of electronic structure 2.
