the circuit board with no intermediate connectors. the entire assembly is then encased in the blob of black epoxy that you can see in the photograph that provides protection. the end result is tiny compared to a packaged chip. let's take a look at how LEDs are packaged and how they could also take advantage of chip-on-board techniques.

The general term for COB technology is actually 'direct chip attachment', or DCA. Aside from circuit boards used for COB's, various substrates are available for use in DCA. There are, for instance, ceramic and glass ceramic substrates which exhibit excellent dielectric and thermal properties.

technology will rest upon the successful implementation of the ad-vanced packaging technology in this design. 3. Design and Fabrication Details The four major COB technology components and processes are (a) known good die (KGD), (b) PWB technology, (c) chip attach technology, and (d) die coating. These processes are described in the next section. 3.1.

Design, Fabrication, and Qualification of Chip- On-Board

Chip-on-board (COB) technology involves attaching a semiconductor die directly to a PCB substrate with adhesive, wire bonding it to a circuit pattern already present on the board, and then encapsulating it.

proven. It is the technology of the future. 1.1 Scope This document provides guidelines for the use of Chip-on-Board Technology (hereafter this term may be referenced by the acronym COB). These guidelines include: " Design guidelines, " Manufacturing information, " Assembly guidelines, " Testing guidelines, and " Bibliographic references.

The bare chip is adhered and wire bonded to the board, and an epoxy is poured over it to insulate and protect it. For illustrative purposes only, this picture shows a clear epoxy.

Chip-on-Glass LCD Driver Technology "œChip on Glass" (COG). Whereas today, manufacturers often implement LCDs by connecting a cased LCD driver integrated circuit with the physical display via a PCB, COG technology is an alternative design methodology in which the LCD driver mounts directly on the display glass. Relatively new to the LED market, chip on board (COB) LEDs offer many advantages over the standard options. COB LEDs are basically multiple LED chips (typically nine or more) bonded directly to a substrate by the manufacturer to form a single module.

High-power LED arrays use optimized chip-on-board technology for brilliant performance. In order to reap the benefits of high power LEDs, special requirements concerning thermal management and opto-mechanical layout have to be met, explains Oliver Kückmann of PerkinElmer ELCOS GmbH.
