

chronic obstructive pulmonary disease pdf

Chronic obstructive pulmonary disease (COPD) is a type of obstructive lung disease characterized by long-term breathing problems and poor airflow. The main symptoms include shortness of breath and cough with sputum production. COPD is a progressive disease, meaning it typically worsens over time. Eventually everyday activities, such as walking or getting dressed, become difficult.

Chronic obstructive pulmonary disease - Wikipedia

COPD (chronic obstructive pulmonary disease) makes it hard for you to breathe. The two main types are chronic bronchitis and emphysema. The main cause of COPD is long-term exposure to substances that irritate and damage the lungs.

Chronic Obstructive Pulmonary Disease (COPD) self-management interventions should be structured but personalised and often multi-component, with goals of motivating, engaging and supporting the patients to positively adapt their behaviour(s) and develop skills to better manage disease. Exacerbation action plans are considered to be a key component of COPD self-management interventions.

Self-management interventions including action plans for

1. Introduction. Chronic obstructive pulmonary disease (COPD) is a common and progressive condition characterized by airflow limitation that is not fully reversible and is associated with high morbidity, mortality and burden on society. Conservative estimates anticipate that by the year 2030, COPD will be the third leading cause of global mortality, directly responsible for 7.8% of all deaths.
