UN Climate Change News, 6 December 2018 – A key set of recommendations that aim to help countries cope with the displacement of people as a result of climate change impacts such as prolonged droughts will be discussed at the UN Climate Change Conference (COP24) in Katowice, Poland.

### **UNFCCC**

EPA research improves knowledge of the health and environment effects of climate change and provides sustainable solutions for communities to effectively manage and reduce the impacts of a changing climate.

### **Climate Change Research | US EPA**

Remedies at contaminated sites may be vulnerable to the impacts of climate change and extreme weather events. EPA's Superfund program has developed an approach that raises awareness of these vulnerabilities and applies climate change and weather science as a standard operating practice in cleanup projects.

### **Superfund Climate Change Adaptation | US EPA**

Climate change adaptation is a response to global warming (also known as "climate change" or "anthropogenic climate change"), that seeks to reduce the vulnerability of social and biological systems to relatively sudden change and thus offset the effects of global warming. Even if emissions are stabilized relatively soon, global warming and its effects should last many years, and adaptation ...

### **Climate change adaptation - Wikipedia**

This page introduces what climate change is, the potential impacts and resistance to the otherwise accepted understanding that it is man-made climate change.

### **Climate Change and Global Warming Introduction**

Most Americans recognize climate change, but some are still unsure about its causes. Tens of thousands of scientists in more than a hundred nations have amassed an overwhelming amount of evidence pointing to a clear conclusion: Humans are the main cause. We're the ones who burn fossil fuels and clear trees that absorb carbon dioxide, sending heat-trapping gases into the atmosphere.

### **9 ways we know humans triggered climate change**

Around the world, scientists are tracking storms that are bigger, heat that is more intense and droughts that last longer. It's climate change at work, and we can curb it.

### **Why you need to care about climate change – now**

Greenpeace will never stop fighting for a greener, healthier world for our oceans, forests, food, climate, and democracy – no matter what forces stand in our way.

### **Greenpeace USA**

Weather modification is the act of intentionally manipulating or altering the weather. The most common form of weather modification is cloud seeding, which increases rain or snow, usually for the purpose of increasing the local water supply. Weather modification can also have the goal of preventing damaging weather, such as hail or hurricanes, from occurring; or of provoking damaging weather ...

A brief history of climate panic and crisis – both warming and cooling. Anthony Watts From But Now You Know. There is most certainly a pattern to climate change...but it's not what you may think:

## **ICECAP**

From start-ups to major corporates, companies are developing strategies in response to disruptive changes that have been brought by climate change and the low carbon transition.

## **Climate Change 2018 | Chatham House**

Abstract. Climate change is expected to impact ecosystems directly, such as through shifting climatic controls on species ranges, and indirectly, for example through changes in human land use that may result in habitat loss.

## **Climate change, wine, and conservation | PNAS**

Climate change threatens human health and well-being in many ways, including impacts from increased extreme weather events, wildfire, decreased air quality, and illnesses transmitted by food, water, and diseases carriers such as mosquitoes and ticks.

Climate change in Vermont is resulting in hotter summers, shorter winters, and more frequent storms. These trends are expected to continue in the future. The devastation from Tropical Storm Irene, the increasing occurrence of Lyme disease, and more frequent cyanobacteria (blue-green algae) blooms are just a few examples of how climate change can impact Vermonters' health.

Deadly Climate Change From Nuclear War: A threat to human existence Steven Starr, PSR, University of Missouri Abstract. A tiny fraction of the operational nuclear arsenals, if detonated within large cities, would generate enough smoke to cause catastrophic disruptions of the global climate and massive destruction of the protective stratospheric ozone layer.
