beginning of quantum mechanics. However, it can not be said that Einstein invented the quantum mechanics. Max Planck, Louis de Broglie and many others all have contributed to the theory of quantum mechanics. In 1925 Werner Heisenberg, Max Born and Pascual Jordan developed the matrix mechanics formulation of quantum mechanics, which is now commonly used.

The quantum harmonic oscillator and hence, the coherent states arise in the quantum theory of a wide range of physical systems. For instance, a coherent state describes the oscillating motion of a particle confined in a quadratic potential well (for an early reference, see e.g. Schiff's textbook). The coherent state describes a state in a system for which the ground-state wavepacket is displaced from the origin of the system.
