Quantum computing is computing using quantum-mechanical phenomena, such as superposition and entanglement. A quantum computer is a device that performs quantum computing. Such a computer is different from binary digital electronic computers based on transistors. Whereas common digital computing requires that the data be encoded into binary digits (0 and 1), each of which is always in one of two ...

In mathematics, a zero, also sometimes called a root, of a real-, complex- or generally vector-valued function is a member of the domain of such that $f(x) = 0$; that is, x is a solution of the equation $f(x) = 0$. In other words, a "zero" of a function is an input value that produces an output of 0. A root of a polynomial is a zero of the corresponding polynomial function.

This is the first tutorial in the "Livermore Computing Getting Started" workshop. It is intended to provide only a very quick overview of the extensive and broad topic of Parallel Computing, as a lead-in for the tutorials that follow it.

Another way to see this is that $1/z \sin z = 1/z^2 g(z)$ where $g(z) = z \sin z$ Now we could expand $g(z) = z/\sin z$ as a Taylor series about $z = 0$. But since $g(z)$ is an
