of all continuous functions from  $0$  into  $0$  with the topology of pointwise convergence (the product topology). It will be shown that every space can be, embedded in such a space  $0$ , and that  $0$  can be chosen to have quite strong extension properties for  $0$ -valued continuous functions.

is continuous. The lattice of lower semicontinuous extended functions  $f: X \rightarrow \mathbb{R} \cup \{\pm\infty\}$  on a compact space is continuous. The concepts of algebraic and arithmetic lattices are traditional; the concept of a continuous lattice has been introduced by D. Scott about 5 years ago and he baptized them.

In Section O-4 we briefly discuss meet continuous lattices, of which both continuous lattices and complete Heytingalgebras (frames) are (overlap-

### **Continuous Lattices and Domains - The Library of Congress**

This paper is mainly devoted to the construction of homomorphisms of  $M$ -continuous lattices into the unit interval  $[0, 1]$ . We present a direct approach to the construction of such homomorphisms and show that  $A$ -continuous lattices admit enough homomorphisms into  $[0, 1]$  to separate points.

## **CONSTRUCTION OF HOMOMORPHISMS OF $\wedge$ -CONTINUOUS LATTICES**

It is then shown that all such spaces are complete lattices whose lattice structure determines the topology  $\hat{\epsilon}$  these are the continuous lattices  $\hat{\epsilon}$  and every such lattice has the extension property. With this foundation the lattices are studied in detail with respect to projections, subspaces, embeddings, and constructions such as products, sums, function spaces, and inverse limits.
