Superspace is the coordinate space of a theory exhibiting supersymmetry. In such a formulation, along with ordinary space dimensions x, y, z, \dots , there are also "anticommuting" dimensions whose coordinates are labeled in Grassmann numbers rather than real numbers. The ordinary space dimensions correspond to bosonic degrees of freedom, the anticommuting dimensions to fermionic degrees of freedom.

Magnetic vector potential. The magnetic vector potential A is a vector field, defined along with the electric potential Φ (a scalar field) by the equations: $\nabla \times A = B$, $-\nabla \Phi - \dot{A} = E$, where B is the magnetic field and E is the electric field. In magnetostatics where there is no time-varying charge distribution, only the first equation is needed. (In the context of electrodynamics, the ...

Modified General Relativity. Authors: Gary Nash Comments: 18 Pages. A modified Einstein equation of general relativity is obtained by using the principle of least action, a decomposition of symmetric tensors on a time oriented Lorentzian manifold, and a fundamental postulate of general relativity.

The Discreteness of Space is the Cause of the Quantization of the Wavelength. Authors: Miheev Sergey Vladimirovich Comments: 2 Pages. The requirement of invariance with respect to phase change imposed on free oscillations in discrete space limits the wavelength of free oscillations to discrete values that are multiples of the minimum wavelength.
