Ancient DNA is a powerful tool to understand the evolutionary dynamics of both current and ancestral

populations. Posth et al. use ancient DNA to elucidate important questions surrounding the peopling of Central and South America, giving us greater insights into the ancestry of genetically understudied populations.

Issue: Cell

x Dakin et al. show that perception of verticality is excessively affected by rotating visual scenes and visual noise in people with a form of genetic cerebellar degeneration. This increased reliance on visual cues strongly suggests that the human cerebellum processes vestibular signals from the inner ear for the brain to estimate which way is up.
