The Hubble Ultra-Deep Field (HUDF) is an image of a small region of space in the constellation Fornax, containing an estimated 10,000 galaxies. The original release was combined from Hubble Space Telescope data accumulated over a period from September 24, 2003, through to January 16, 2004.

### **Hubble Ultra-Deep Field - Wikipedia**

The Hubble Deep Fields One of the main scientific justifications for building Hubble was to measure the size and age of the Universe and test theories about its origin. Images of faint galaxies give 'fossil' clues as to how the Universe looked in the remote past and how it may have evolved with time.

### **The Hubble Deep Fields | ESA/Hubble | ESA/Hubble**

The Hubble Deep Field is an excellent image to use for representative sampling. The Hubble Deep Field is divided into three areas, or cameras, called A, B, and C.
