Autism is a developmental disorder characterized by troubles with social interaction and communication, and by restricted and repetitive behavior. Parents usually notice signs during the first two or three years of their child's life. These signs often develop gradually, though some children with autism reach their developmental milestones at a normal pace before worsening.

Over many years the typical cancer personality has trained their body to remain rigid and tense in response to life stressors. And when the body is not relaxed the mind will not relax sufficiently enough to enter the deep-sleep-cycle to produce melatonin, which is the primary hormone responsible for inhibiting cancer cell

growth.
