An electric locomotive is a locomotive powered by electricity from overhead lines, a third rail or on-board energy storage such as a battery or a supercapacitor.. Electric locomotives with on-board fueled prime movers, such as diesel engines or gas turbines, are classed as diesel-electric or gas turbine-electric and not as electric locomotives, because the electric generator/motor combination ...

A striking aspect of the distribution of "potentially available cropland" is that, from a regional perspective, much of Africa's unutilized arable land is found in just a few countries (Chamberlin et al., 2014, Deininger et al., 2011). Depending upon the definitions and assumptions used, as much as 90% of SSA's unutilized arable land is located in just 8 countries ().

Land pressures, the evolution of farming systems, and

Over 1990-2017 all regions and human development groups have made substantial progress. The global HDI value in 2017 was 0.728, up about 21.7 percent from 0.598 in 1990. Across the world, people are living longer, are more educated and have greater livelihood opportunities.

Electricity is the set of physical phenomena associated with the presence and motion of matter that has a property of electric charge. In early days, electricity was considered as being not related to magnetism. Later on, many experimental results and the development of Maxwell's equations indicated that both electricity and magnetism are from a single phenomenon: electromagnetism.
