

### **dinosaur discoveries pdf**

Size has been one of the most interesting aspects of dinosaur science to the general public and to scientists. Dinosaurs show some of the most extreme variations in size of any land animal group, ranging from the tiny hummingbirds, which can weigh as little as three grams, to the extinct titanosaurs, which could weigh as much as 70 tonnes (69 long tons; 77 short tons).

Types of dinosaurs. Dinosaurs are united by at least 21 traits in their skulls and skeletons. These common characters (called 'synapomorphies') are the reason palaeontologists are sure dinosaurs had a common origin. However, when definite dinosaur fossils appear (early in the Upper Triassic), the group had already split into two great orders, the Saurischia, and the Ornithischia.

Xing et al. describe the tail of a non-avian theropod (coelurosaur) preserved in Burmese amber, combining bone outlines with microscopic details of plumage and integument. This specimen sheds new light on the appearance and evolution of plumage of dinosaurs, providing a direct association between amber-entombed plumage and body fossil material.
