

### **dissipation pdf**

Sources of Power Dissipation in a Motor Driver [www.ti.com](http://www.ti.com) As an approximation, switching losses for each output are calculated as follows:  $PSW = PSW\_RISE + PSW\_FALL$  where PSW is the total switching loss (in watts) for one output, and PSW\_RISE is the power dissipated during the rising edge, and PSW\_FALL is dissipated during the falling edge. Expanding on this:

Early CPUs. Note that these figures include power dissipation due to energy lost by the computer's power supply and some minor peripherals. However, since the CPU component of these early computers easily accounted for most of the computer's power dissipation, they are mentioned here:
