Protein-Nucleic Acids Interactions, Volume 91 - 1st Edition

Although ChIP and 3C operate through same basic principle of cross-linking protein–DNA interactions but the two techniques differ from each other in the information they provide whereas ChIP provides information about DNA-binding activity of a protein, 3C is used to study interaction between two different genomic sites looped by a protein factor.

DNA'Protein Interactions: Principles and Protocols - PDF

DNA–protein interactions mediate a wide range of cellular processes ranging from cell cycle, via cellular differentiation and developmental time courses, to the maintenance of an intracellular metabolic and physiological balance [1–3]. In eukaryotes, a large number of diverse proteins are crucially

Analysis of DNA protein interactions: from nitrocellulose

DNA Protein interactions play very vital roles in any living cell. It controls various cellular processes which are very essential for living beings, viz. replication, transcription, recombination ...
