DOWNLOAD PDF. This page intentionally left blank ... Another indication of the disproportionate expansion of the lateral dopaminergic system during human evolution is the enormous increase of the human striatum, which contains the highest concentration of dopamine in the brain. As noted in Chapter 1, the striatum nearly doubled from chimpanzees ...

### **The Dopaminergic Mind in Human Evolution and History - PDF**

Dopamine is widely distributed in metazoans and is implicated in many physiological functions. Dopaminergic signaling is mediated through two classes of dopamine receptors, D1-like and D2-like.

The dopaminergic system is involved in sensory, autonomic, and motor control in the spinal cord. The dense dopaminergic neuron projection to the intermediolateral column, and its hypothalamic origin, are consistent with its role in the regulation of sympathetic outflow (Qu et al., 2006).

### **Dopaminergic System - an overview | ScienceDirect Topics**

Together with a better knowledge of the possible evolutionary history of the molecular components of DA neurons, genetic networks controlling DA neuron differentiation, the localization in the brain, and the new data obtained on the protochordate DA systems, we propose renewed hypothesis of the evolution of DA systems in craniates.

### **The Evolution of Dopamine Systems in Chordates**

The basic anatomy of the central nervous system (CNS) is well conserved within the vertebrates and differs in significant ways from that of non-vertebrate chordates. Of the latter, amphioxus is of special interest, being the best available stand-in for the basal chordate condition. Immunohistochemical and gene expression studies on the developing CNS of amphioxus embryos and larvae are now ...

### **The origin of dopaminergic systems in chordate brains**

the central nervous system. The nigrostriatal pathway originates in the substantia nigra and projects to the dorsal striatum. The mesolimbic and mesocortical projections originate in the ventral tegmental area and project both to ventral striatum and areas in the prefrontal cortex, respectively.

dopamine A monoamine NEUROTRANSMITTER and hormone with an adrenaline-like action. Dopamine is the principal neurotransmitter in the extrapyramidal system. It is formed in the brain from the amino acid tyrosine via dopa and the latter, in the form of levodopa is used to treat PARKINSON'S DISEASE. Dopamine is the precursor of noradrenaline.

### **Dopaminergic system | definition of Dopaminergic system by**

Dopaminergic pathways, sometimes called dopaminergic projections, are the sets of projection neurons in the brain that synthesize and release the neurotransmitter dopamine. [1] [2] Individual neurons in these pathways are referred to as dopamine neurons .
