### **Echocardiography and Cardiovascular Function: Tools for**

For over a quarter of a century, echocardiography has made an unparalleled contribution to clinical cardiology as a major tool for real-time imaging of cardiac dynamics.

### **Echocardiography and cardiovascular function : tools for**

Echocardiography is widely used to assess cardiac function, and provides noninvasive information which is invaluable for the diagnosis of various disease states. In spite of its numerous advantages, in the clinical arena echocardiography has remained mostly qualitative and subjective.

### **Guidelines for the Echocardiographic Assessment of the**

Echocardiography (transthoracic echocardiography [TTE] or TEE) is the technique of choice for the diagnosis, management and monitoring of patients with IE. TEE must be performed in case of negative TTE

when there is a high index of suspicion for IE and in patients with positive TTE to rule out local complications.

Heart failure (HF) is a complex clinical syndrome that can result from any structural or functional cardiac disorder that impairs the ability of the ventricle to fill with or eject blood. Echocardiography represents the

#### **Role of echocardiography in diagnosis and risk**

The appropriate use of echocardiography may reduce the need for invasive diagnostic cardiac procedures. The right side of the heart has recently gained interest among cardiologists as it became clear that abnormalities of the right heart morphology and function are associated with increased morbidity and mortality.

#### **Echocardiographic Evaluation of the Right Heart**

The increasing prevalence of overweight or obese children and adolescents is a significant global health concern. Although the effect of obesity on cardiovascular function has been investigated, little is known on the impact of associated obstructive sleep apnea (OSA) in obese youth.

#### **Effect of Obstructive Sleep Apnea on Cardiovascular**

Noninvasive modalities to measure global and regional LV function include echocardiography, cardiovascular magnetic resonance (CMR), and single photon emission computed tomography (SPECT). These techniques have been shown to agree well with invasively acquired LV function assessment by angiography.

#### **Global and regional left ventricular function assessment**

Echocardiography uses standard two-dimensional, three-dimensional, and Doppler ultrasound to create images of the heart. Echocardiography has become routinely used in the diagnosis, management, and follow-up of patients with any suspected or known heart diseases.
