and fertilizer P, with an emphasis on soil-plant interactions. The focus is on the changing concepts of the behaviour of both soil and fertilizer P and on the need to define and assess their recovery and, thus, P-use efficiency, more appropriately. The report also outlines strategies for improving P-use efficiency.

Efficient Use of Fertilizers. One of the most important ways the grower can conserve fertilizer energy is making efficient use of fertilizer. Economists generally recommend that increasing amounts of fertilizer should only be used when the additional value of yield realized exceeds the cost of nutrients applied.
