543 Chapter 9 Forestry EXECUTIVE SUMMARY During the last decade of the 20th century, deforestation in the tropics and forest regrowth in the temperate zone and parts of the boreal zone remained the major factors responsible for

### **Forestry - IPCC**

Forest types are distinguished from each other according to species composition (which develops in part according to the age of the forest), the density of tree cover, type of soils found there, and the geologic history of the forest region.

### **Forest | ecosystem | Britannica.com**

Tropical Forests Sean C Thomas, University of Toronto, Toronto, Ontario, Canada Jennifer L Baltzer, University of Toronto, Toronto, Ontario, Canada Tropical forests, while occupying only one-tenth of the world's land area, are disproportionately important in terms of global biogeochemical cycles and as home to more than half of the world's species.

### **Tropical Forests Introductory article - Homepages at WMU**

To meet production needs, the Forest Service adopted the "conversion" model of forestry—that is, harvesting old-growth, so-called decadent forests and replanting clear-cut areas with vigorous, fast-growing trees.
