form of the energy is; it could be kinetic energy (the result of motion) like the energy of the asteroid, or chemical energy like the energy in the explosive TNT (trinitrotoluene). It is the rapid conversion of this energy into heat that is at the heart of most explosions.

1. Energy and Power

Elastic energy is energy stored in objects by the application of a force. Compressed springs and stretched rubber bands are examples of elastic energy. Nuclear energy is energy stored in the nucleus of an atom—the energy that binds the nucleus together. The energy can be released when the nuclei are combined or split apart.

e Introduction to Energy - NEED

Introduction Energy is usually defined as the ability to do work. This is an anthropocentric and utilitarian perspective of energy; however, it is a useful definition for engineering where the aim of machines is to convert energy to work. As a more general

Work, Energy & Power AP Physics B. There are many different TYPES of Energy. Energy is expressed in JOULES (J) $4.19 \text{ J} = 1 \text{ calorie}$ Energy can be expressed more specifically by using the term WORK(W) Work = The Scalar Dot Product between Force and Displacement.

energy supplies last longer and give us more time before we run out of stored fossil and atomic fuels. The use of renewable and alternative energy sources can save us money, assure that our grandchildren and great grandchildren will have enough energy, and free us from the uncertainties of depending on energy supplies outside the United States.

RENEWABLE ENERGY AND OTHER ALTERNATIVE ENERGY SOURCES O

Energy has a large number of different forms, and there is a formula for each one. These are: gravitational energy, kinetic energy, heat energy, elastic energy, electrical energy, chemical energy, radiant energy, nuclear energy, mass energy. If we total up the formulas for

Understanding the physics of energy means learning about two sorts of things. 2 - How does each particular form of energy work. 1 - What general principles unify the physics of energy - applying to energy in all its different forms. We'll start with the general principles. These are known as the laws of
