Errors in Chest Radiography | SpringerLink

The portable, or bedside, chest radiograph (PCXR) remains the most commonly ordered imaging study, particularly in intensive care unit patients, where valuable information can be gained at a low cost without the risk and expense of patient transport.

Reducing errors in portable chest radiography

Common experience in radiology suggests that many errors are of little or no significance to the patient, and some significant errors remain undiscovered. Errors are inevitable, and the concept of necessary fallibility must be accepted. Equally a threshold of competency is required of all professionals involved in the delivery of radiology services.
