A Technology Decision " Adhesive Lamination or Extrusion Coating/Lamination? Rory Wolf, Enercon Industries Corporation Abstract Extrusion-based coating/laminating and adhesive-based film laminating are different manufacturing techniques a

### **A Technology Decision " Adhesive Lamination or Extrusion**

Coating and lamination are two functional processes which are used make a proper finishing to the textile material. The coating formulation with different textile grade polymer like PVC, PU, acrylic, PTFE are hugely used to make a textile product with multipurpose way like- waterproof protective clothing, tarpaulin, protective clothing, electrical insulation etc. on the other hand lamination ...

Thermoplastic polyurethane (TPU) is any of a class of polyurethane plastics with many properties, including elasticity, transparency, and resistance to oil, grease and abrasion. Technically, they are thermoplastic elastomers consisting of linear segmented block copolymers composed of hard and soft segments.

A thermosetting polymer (also called a thermosetting plastic or thermosetting resin) is a polymer which becomes irreversibly hardened upon being cured. Curing is caused by the action of heat or suitable radiation and may be promoted by high pressure or the use of a catalyst. It results in extensive cross-linking between polymer chains to give an infusible and insoluble polymer network.

### **Thermosetting polymer - Wikipedia**

1. Avon Group Avon Group innovates in NVH technology, promoting the advantages of Polyethylene foam as an alternative to standard rigid air ducts.

Polyethylene (PE), despite having the simplest basic structure of any polymer (a repetition of CH<sub>2</sub> units), is the largest tonnage plastics material. The main attractive features of PE are its low price, excellent electrical insulation over a wide range of frequencies, very good chemical resistance, good processability, toughness, flexibility, and "in thin films of certain grades" transparency.

PLA Production. Lactic acid (2-hydroxy propionic acid), the single monomer of PLA, is produced via fermentation or chemical synthesis. Its 2 optically active configurations, the L(+) and D(ˆ) stereoisomers are produced by bacterial (homofermentative and heterofermentative) fermentation of carbohydrates.
