However, the dream of a robot running as fast and as elegantly as a human is still far from becoming reality. Control of such fast motions is still a big technological issue in robotics, and the maximum running speed of contemporary robots is still much smaller than that of human track runners.

(PDF) Fast Motion of Plants: from Biomechanics to Biomimetics

In the past decades, much progress has been made in the field of walking robots. The current state of technology makes it possible to create humanoid robots that nearly walk like a human being, climb stairs, or avoid small - obstacles. However, the dream of a robot running as fast and as elegantly as

anatomy and biomechanics of the musculoskeletal system. The human body may be viewed as a machine formed of many different parts that allow motion. These motions occur at the many joints formed by the specific parts that compose the body's musculoskeletal system. Although there is some controversy and speculation among those
