

### **fine needle aspiration cytology pdf**

Fine-needle aspiration (FNA) is a diagnostic procedure used to investigate lumps or masses. In this technique, a thin (23â€“25 gauge), hollow needle is inserted into the mass for sampling of cells that, after being stained, will be examined under a microscope (). The sampling and biopsy considered together are called fine-needle aspiration biopsy (FNAB) or fine-needle aspiration cytology (FNAC ...

Abstract. Introduction. According to the National Cancer Institute (NCI) guidelines in 1996, breast lesions are categorized as C1 to C5 on fine needle aspiration (FNA) cytology.

### **International Journal of Breast Cancer - Hindawi**

Currently, accurate diagnosis of breast lesions depends on a triple assessment approach comprising clinical, imaging and pathologic examinations. Fine needle aspiration cytology (FNAC) is widely adopted for the pathologic assessment because of its accuracy and ease of use. While much has been written about the atypical and malignant categories of FNAC diagnosis, little covers the non ...

Fine-needle aspiration, or fine-needle aspiration cytology (FNAC), involves use of a needle attached to a syringe to collect cells from lesions or masses in various body organs by microcoring, often with the application of negative pressure (suction) to increase yield. FNAC can be performed under palpation guidance (i.e., the clinician can feel the lesion) on a mass in superficial regions ...

May 2015 – The value of standardized terminology for reporting cytology and histopathology has been essential in our work and important for patient care. The Bethesda System for Reporting Cervical Cytology, put forward in 1988 thanks to the pioneering work of Diane Solomon, MD, and Robert Kurman, MD, saw unprecedented adoption around the world.
