On the contrary, many situations in mathematical physics most definitely require singular foliations for a proper modeling. The global study of foliations in the spirit of Poincare was begun only in the 1940's, by Ehresmann and Reeb.

Foliations on Riemannian manifolds. by Tondeur, Philippe. Publication date 1988. Topics Foliations ... and explores some of the interactions of foliations with the Riemannian geometry of the ambient manifold. The author begins with motivations for the study of the subject and proceeds to discuss the instructive special case of transversally ...

exceptional leaves do exist, Riemannian foliations on contractible manifolds are simple foliations, i.e., they are given by Riemannian submersions. We can verify this under additional finiteness assumptions (cp. Appendix A for more about H-spaces): Corollary 1.2. Let  $F$  be a Riemannian foliation on a complete, contractible Riemannian manifold  $M$ .

Riemannian manifold is a complex manifold  $M$ , together with a (holomorphic) complex tensor field  $G$  that is a complex scalar product (i.e., nondegenerate, symmetric,  $\mathbb{C}$ -bilinear form) on each holomorphic tangent space of  $M$ .

Description : This monograph is based on the author's results on the Riemannian geometry of foliations with nonnegative mixed curvature and on the geometry of sub manifolds with generators (rulings) in a Riemannian space of nonnegative curvature. The main idea is that such foliated (sub) manifolds can be decomposed when the dimension of the leaves (generators) is large.
