verification and validation procedures, i.e. formal methods to prove specific static and dynamic properties of the programs, as for example liveness, unambiguity or response times. The papers by Canet et al. [9] and by Mertke and Menzel [10] deal with this aspect of formal method application to PLC programming.

systems, in the case of programming languages formal methods are also a good design tool. Formal

methods applied to programming languages come in many different flavors under many different names such as “axiomatic semantics”, “operational semantics”, “denotational semantics”, etc.
