Fuzzy Sets in Information Retrieval and Cluster Analysis

The fuzzy sets allows the grade of membership for x which takes values from a unit interval $[0,1]$. This capability of fuzzy set to express gradual shift from membership to non membership has a practical value. Fuzzy sets allows us to express vague concepts expressed in natural language.

The set-theoretic facet, FL/S, is concerned, in the main, with the theory of fuzzy sets. Most of the mathematical literature on fuzzy logic relates to FL/S The relational facet, FL/R, is focused on fuzzy dependencies, granulation, linguistic variables and fuzzy rule sets. Most practical applications of fuzzy logic relate to FL/R

1 FUZZY DECISION MAKING Decision Making A " set of alternatives or possible actions. A " set of states (various conditions) of the environment in which decisions are taken. " set of consequences resulting from the choice of a particular alternative. N" is a mapping $A \rightarrow C$; specifying a consequence for each element of the environment.

The fuzzy decision tree combines the theory of the decision tree and the theory of fuzzy sets and fuzzy logic. In this way the decision trees can be used for modelling vagueness and ambiguity. Often the decision trees are not mentioned explicitly when making decisions with a fuzzy approach, but inferential algorithms of fuzzy decision

Fuzzy Logic Explained Fuzzy Set Theory Is a man whose height is 5â€™ 11-1/2â€• average or tall? A fuzzy system might say that he is partly medium and partly tall. In fuzzy terms, the height of the man would be classified within a range of $[0, 1]$ as average to a degree of 0.6, and tall to a degree of 0.4.

produces an aggregate fuzzy set from an fs-set and its cardinal set. The approximate functions of an fs-set are fuzzy. An fs-aggregation operator on the fuzzy sets is an operation by which several approximate functions of an fs-set are combined to produce a single fuzzy set which is the aggregate fuzzy set of the fs-set.
