tions of many gamma-ray bursts. Binary merger theory: A theory on the origin of gamma-ray bursts, in which two compact stellar objects merge. The objects could be neutron stars or stellar black holes, and the merger would result in a new, single black hole. Black hole: An object so dense that its escape velocity exceeds the speed of light.

Gamma Ray Bursts | Flashes of gamma rays associated with energetic explosions in distant galaxies. | Believed to be most luminous electromagnetic events since the Big Bang. | Observed fluxes are hundreds of times brighter than supernovae, although seem to be highly beamed, so that total luminosity is

Short gamma-ray bursts (SGRBs) are among the most luminous explosions in the Universe and their origin still remains uncertain. Observational evidence favors the association with binary neutron ...

quality observations of hundreds of bursts, and facilitating a wide range of follow-up observations within seconds of each event, Swift has revealed an unforeseen richness in observed burst properties, shed light on the nature of short-duration bursts, and helped realize the promise of GRBs

Gamma-Ray Bursts in the Swift Era - arXiv

PDF | Gamma-ray bursts (GRBs) are the most powerful explosions in the universe. They have remained the object of intense research ever since their discovery was declassified in the early 1970s.

Gehrels and Mészáros (p. [932][2]) review what has been learned about these events since the launch of NASA's Swift (2004) and Fermi (2008) satellites. The current interpretation is that gamma-ray bursts are related to the formation of black holes. Type Ia supernovae are used as cosmological distance indicators.

Gamma-Ray Bursts | Science

No gamma-ray burst from within our own galaxy, the Milky Way, has been observed, and the question of whether one has ever occurred remains unresolved. In light of evolving understanding of gamma-ray bursts and their progenitors, the scientific literature records a growing number of local, past, and future GRB candidates.
