Genetic Testing for Alzheimer's Disease

discusses when genetic testing for Alzheimer disease is considered medically necessary. Note: The Introduction section is for your general knowledge and is not to be taken as policy coverage criteria.

12.04.13 Genetic Testing for Alzheimer Disease

National Institute on Aging and the Alzheimer's Association. Other diagnostic tests for AD include cerebrospinal (CSF) fluid levels of Tau protein or beta-amyloid precursor protein. Genetic testing for Alzheimer's disease may be offered along with analysis of cerebral spinal fluid (CSF) levels of the Tau protein and amyloid- β peptide 1-42.

genetic testing for alzheimers disease - Blue Cross NC

GENETIC TESTING FOR ALZHEIMER DISEASE (cont.) Description: Alzheimer disease (AD) is the most common cause of dementia in elderly individuals. Early-onset AD is much less common, but can occur in non-elderly individuals. For late-onset AD, there is a component of risk that runs in families, suggesting the contribution of genetic factors.

Genetic Testing for Alzheimer Disease - AZBlue

Genetics and Alzheimer's disease ENGLISH B&W Alzheimer's disease genes Alzheimer's disease runs in a small number of families, where up to half of the family members are at risk. Alzheimer's disease is common amongst elderly people, so having once close relative with the disease is not evidence of a family link.

Genetics and Alzheimer's disease - Dementia SA

Because the benefits of genetic testing are often modest, and the tests themselves are often imprecise in identifying risk, consideration must be given to potential harm in revealing the test results.

Effect of Genetic Testing for Risk of Alzheimer's Disease

Genetic testing for the diagnosis or risk assessment of Alzheimer's disease is considered not covered due to inadequate data on the reliability of such testing and that testing affects the outcomes of treatment.
