Biodiversity is not evenly distributed, rather it varies greatly across the globe as well as within regions. Among other factors, the diversity of all living things depends on temperature, precipitation, altitude, soils, geography and the presence of other species. The study of the spatial distribution of organisms, species and ecosystems, is the science of biogeography.

Biodiversity - Wikipedia

He is broadly interested in global biodiversity science. His research is interdisciplinary and combines elements of biogeography, community ecology, landscape ecology, macroecology, global change ecology, evolutionary and comparative biology, biodiversity informatics and conservation.
