differential geometry, with the exception of a few isolated results, had to wait till algebraic topology and Lie groups have paved the way. Global differential geometry must be considered a young field.

### **DIFFERENTIAL GEOMETRY; ITS PAST AND ITS FUTURE**

The fundamental concept underlying the geometry of curves is the arclength of a parametrized curve.

Definition. If  $\gamma: [a, b] \rightarrow \mathbb{R}^3$  is a parametrized curve, then for any  $a < t < b$ , we define its arclength from  $t = a$  to  $t = b$  to be  $s(t) = \int_a^t \|\dot{\gamma}(u)\| du$ . That is, the distance a particle travels—the arclength of its trajectory—is the integral of its speed.
