

global environmental change modelling pdf

Global Environmental Change is a peer-reviewed international journal publishing high quality, theoretically and empirically rigorous articles, which advance knowledge about the human and policy dimensions of global environmental change. The journal interprets global environmental change to mean the outcome of processes that are manifest in localities, but with consequences at multiple spatial, temporal and socio-political scales.

Global Environmental Change - Official Site

The authors of Global Environmental Change: Modelling and Monitoring recognize that environmental change very often happens suddenly and unexpectedly and cannot be reliably predicted by the projections of smooth, gradual change that computer models produce. Predicting future socio-economic and ecological

Global Environmental Change: Modelling and Monitoring

Efforts to improve modelling of human dimensions of global environmental change and the human dimensions components in broader models of global change must be based on a modular approach, where the modules are defined in terms of the boundaries of states.

trillion/yr, depending on which unit values are used. Global estimates expressed in monetary accounting units, such as this, are useful to highlight the magnitude of eco-services, but have no specific context. However, the underlying data and models can be applied at multiple scales to assess changes resulting from various scenarios and policies.
