model, either in the objective function or in the constraints. Nonconvex programming is one of the hardest
fields of optimization, presenting many challenges in both practical and theoretical aspects.

Introduction to Global Optimization - polytechnique

The papers address current issues in global optimization, mathematical programming, and constraint
programming; they are grouped in topical sections on optimization, constraint satisfaction, and benchmarking.

In the early 1990s, we proposed the integration of constraint programming and optimization techniques within
the branch-and-bound framework for the global optimization of nonconvex nonlinear and mixedinteger
nonlinear programs.

Constraints: money available, non-negative amounts, fractions in $[0,1]$... In the context combinatorial
problems, global optimization is NP-hard Special properties (eg. convexity) of feasible region and
objective function f imply that any local solution is a global solution.

Global Optimization Toolbox provides functions that search for global solutions to problems that contain
multiple maxima or minima. Toolbox solvers include surrogate, pattern search, genetic algorithm, particle
swarm, simulated annealing, multistart, and global search.

Convex optimization has also found wide application in combinatorial optimization and global optimization, where it is used to find bounds on the optimal value, as well as approximate solutions.

The main methods for Kriging-based constrained global optimization of black-box functions have been recalled and evaluated numerically in this paper, on an analytical benchmark with various features (smoothness, active constraints, disjoint feasible areas) and an aerospace design problem.
